

VERS UN MONDE SANS NUCLÉAIRE

3ème Forum Social Mondial Antinucléaire

ni civil, ni militaire

Paris, 2-4 novembre 2017

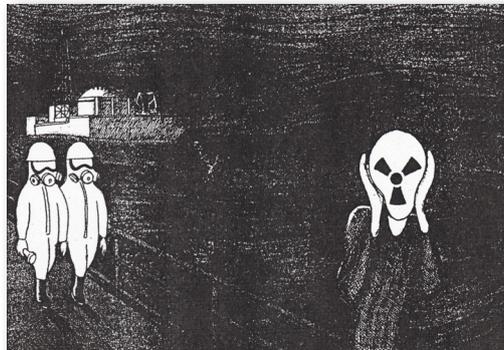

www.wsfnonuke.org

On the road to the Antinuclear World Social Forum 2017

Since the first World Social Forum (WSF) held at Porto Alegre in 2001, the anti- globalization movement has expanded and consolidated. Several WSFs took place in Latin America, in Asia, in Africa and, in August 2016, in North America. New themes enriched this dynamic. In 2013 and 2015, nuclear issues have been the subject of several workshops and the first Antinuclear Social Forum was held in spring 2016 in Tokyo, where a «Call for a nuclear-free world network » was launched. In Montréal, the second Antinuclear Forum took place within the WSF.

Since France is the most nuclearized country in the world in proportion to the number of inhabitants, French antinuclear organizations thought it relevant to **host the next Antinuclear WSF in France, from 2 to 4 November 2017, in Paris.**

In France, during the last few years, an uninterrupted succession of resounding failures occurred: Areva was saved from bankruptcy thanks to government intervention; frauds in the construction of vapour generators and reactor vessel have led to the shutdown of a large part of the nuclear plants for security reasons; EDF adventures in EPR projects (Olkiluoto, Flamanville, Hinkley Point) endanger its financial health.

All over the world, nuclear has generated unmanageable problems. Radioactive wastes are here for thousands of years, and their management is now imposed on future generations. However, shouldn't we stop their production first? The extraction of uranium in third world countries is a major source of pollution, the first victims of which are the mining workers. The health of nuclear maintenance employees is threatened by radiation exposure. The catastrophes of Mayak, Windscale, Three Mile Island, Tchernobyl and Fukushima, have shown how this activity is a source of unmanageable nuisances. Nonetheless, authorities supposed to protect victims actually try to force populations to live in contaminated areas (Ethos program).

How to put an end to this activity which, from material extraction to waste management, is life-threatening? How to avoid a new major disaster? How to firmly engage ourselves on the path to the energy transition?

Contrary to what is claimed by nucleocrats, the development of nuclear energy cannot be a solution to global warming, not only because this activity also emits greenhouse gases (extraction, construction, transport, dismantling, storage) but especially because it would be necessary to construct hundreds of nuclear reactors to meet energy needs, which would greatly increase the risks of accident, wastes and proliferation. Which strategies would allow us to stop quickly the production of nuclear power, together with to reduce the emission of greenhouse gases of anthropogenic origin?

Links between civil and military nuclear are numerous. The former contributes to the proliferation of the latter, with often the same actors, e.g. in France: Areva, CEA and EDF.

In addition to being expensive, the nuclear deterrence policy is criminal. It is in contravention of a UN resolution that condemns the use of nuclear weapons, considered as a crime against humanity. The bomb has caused more deaths in the course of its development than by its use and North hemisphere is still covered with persistent radioactivity resulting from nuclear tests in the 1960's. Will the opening of negotiations, at the UN in 2017, for a treaty banning nuclear weapons be a decisive step towards a world free of nuclear weapons?

For those issues to be debated, we invite you to attend an international meeting. We will share our experiences and discuss together on the means to make possible the emergence of a world free of nuclear weapons and nuclear power generation.

The facilitation Committee of the Antinuclear WSF 2017.

Antinuclear World Social Forum

2-3-4-5 November 2017

Individual registrations:

All participants must register to attend the forum. (Online registration form available on the website) Rate: 20€ or more if you can (10€ for low income).

Financial support

Donations can be made to help setting up the forum, through HelloAsso, a crowd-funding platform for non-profit organizations. <https://www.helloasso.com/associations/at-tac-fsm-an/collectes/pour-un-forum-social-mondial-antinucleaire-en-2017>

66% of the amount donated is tax deductible and you will be given a receipt.

Call for volunteers

Organising the forum can only be made possible with the help and support of people who can give their time freely over these three days. If that is your case, we look forward to meeting you. You can register for volunteer work on the website.

We now hope to see you in Paris, from November 2 to November 4, for a combative and successful anti-nuclear FSM

Website, for any information:

wsfnonuke.org

Where ? : The Bourse du Travail building in Paris
There are three rooms at our entire disposal near the Place de la République (3 rue du Château d'Eau, 67 rue de Turbigo and 29 Boulevard du Temple)

Welcome booth on Thursday 2, from 8.30am onwards. Kiosks and plenary meetings will take place 29 Boulevard du Temple.

Note: eating is prohibited inside the Bourse building, so meals will have to be taken outside, yet we will try to provide sandwiches, coffee and drinks during breaks.

The debates:

Three plenary meetings:

-Opening plenary session, Thursday 2, from 10am to 12am

-Plenary session: "Nuclear victims testimonies", Friday 3, from 16.30 to 19.

-Closing plenary, Saturday 4, from 13.30 to 17.00.

30 time slots, two-and-a-half hour long, are available over the three days for different types of contributions, workshops, interventions, films screenings and debates.

Organizations (association, union, collective union...) are welcome to make a contribution of any kind and from any point of view, providing they are anti-nuclear. Deadline for proposals is July 15th.

Associations that have not financially supported the forum will be asked to pay a 50€ fee.

The facilitation committee will examine the various types of proposals, workshops, interventions et cetera and then let the associations know whether their proposal has been chosen or refused, or whether it could merge with another.

Other initiatives

-A media event is being planned and will be proposed

-A bus ride to Bure will be organized on Sunday 5th. Opponents to the CIGEO project, a monstrous nuclear bin 550 meters under the ground, will welcome us there and take us on a site visit.

-Party time on Friday night

The facilitation committee
